

For video projection with audio and any number of participants.

Duration: 85 seconds

The audio from the video should be played at a low level, loud enough for the participants to interact with, but it should remain in the background.

Project the video so that all participants and the audience can view it. Improvise to the images captured on video—the fall of the raindrops, the movement of the water on the windshield, the movement of the trees in the background, as well as the ebb and flow of the sound of the rain. Feel free to interpret the entire image or a portion of the image.
